## **ACKNOWLEDGEMENTS**

This publication summarizes basic information concerning Florida's poultry industry. It is intended for the use of poultrymen, allied industries and all others who are interested in poultry production.

Many producers, hatcherymen, marketing agencies and others voluntarily supplied information used to develop these statistics. Their cooperation is sincerely appreciated.

This report is made possible through a cooperative effort of the Florida Crop and Livestock Reporting Service, the Market News Section and the Poultry and Egg Inspection Section. The Market News Section has assisted in publishing this bulletin by providing price data and other related statistics. Production and inventory data are official state and USDA statistics prepared by the Florida Crop and Livestock Reporting Service. This publication was prepared by John Cole, Agricultural Statistician.

## TEN YEAR HISTORY

The Florida poultry industry has grown significantly in the past ten years both in commercial egg production and the number of broilers raised. In 1961 the State ranked 22nd among the states in egg production. In 1971 Florida ranked as the 9th largest egg producing State. Also, the State has risen from the 24th ranking broiler producing State in 1961 to 14th in 1971.

**EGG PRODUCTION:** The average number of layers per year, in Florida during 1971 was 222 percent of 1961 or more than double. Egg production increased at a slightly faster pace due to the improvement in rate of lay. Value of production increased at a much slower rate and for 1971 was only 158 percent of 1961. The annual average price received per dozen eggs dropped sharply in 1971 to 24.9 cents per dozen from 33.7 cents in 1970. This compares with the ten year high in 1966 of 39.3 cents per dozen. While 1966 recorded the highest price per dozen for eggs during the last ten years, 1969 set the record high for cash receipts at \$74.8 million.

Nationally during the past ten years the average num-

ber of layers on farms was 108 percent of 1961 with the number of eggs produced at 115 percent for the same period. Value of production was estimated at 106 percent of 1961. The national annual average price per dozen eggs was also off sharply from 1970 at 31.4 cents per dozen. The annual average number of eggs produced per layer has gradually moved upward from 210 in 1961 to 223 eggs per layer in 1971.

**BROILER PRODUCTION:** Broilers produced in Florida during 1971 were a record high and nearly 4 times the number in 1961. The average price per pound for 1971 tied with 1967 as the lowest in the past ten years. However, gross income of \$22.2 million was a record high in 1971.

Nationally, broiler production was 148 percent of 1961 with 1970 as the record high. Gross income from broilers was 157 percent of 1961 with the record high set in 1969 at \$1.5 billion. The price per pound for broilers over the past ten years has been gradually decreasing but the increase in average liveweight has more than offset the price decrease.

### SURVEY METHODS

Monthly estimates of hens and pullets of laying age, pullets not yet of laying age, and of egg production are based upon data obtained from a sample of commercial chicken and egg producers. This sample is selected from the universe of Florida management units. Monthly estimates are expected to be within five percent of the value obtained if a complete enumeration was done each month.

During December of each year all known commercial egg producers in Florida are contacted. This complete enum-

eration established the universe of management units. Management units include all independent producers as well as contractors who report for all contractees.

In the table below is shown a stratification of the universe established by the annual survey of December 1971 and also of the number selected for monthly sample during 1972.

It is to be noted that management units with capacity greater than 400,000 are sampled at a rate of 100 percent.

Number of Management Units in the Universe and Sample, December 1971

Strata	Strata Boundaries		Number of Units	
	Lower	Upper	Universe	Sample
1	400	19,999	115	6
2	20,000	99,999	49	8
3	100,000	399,999	18	12
4	400,000	749,999	6	6
5	750,000 +		5	5
<b>Total</b>			<b>246</b>	<b>37</b>

On page 7 of this publication the numbers of hens and pullets of laying age and pullets less than laying age are tabulated by size of management unit.

POULTRY AND EGG SUMMARY

For the year 1971 Florida farmers received 82 million dollars for chickens and eggs, 16 percent less than in 1970. Sales of chickens, including commercial broilers, totaled 24 million dollars and income from eggs 57 million dollars. Income from eggs in 1971 accounted for 69 percent of the total.

The average price received by producers for eggs was 24.9 cents per dozen, down 8.8 cents from 1970. Broiler prices decreased from 13.0 cents in 1970 to 12.7 cents in 1971.

The average number of layers on Florida farms dur-

ing 1971 was 11,980,000, up 3 percent from 1970.

Rate of lay per day per 100 layers increased from 59.5 eggs in 1970 to 62.5 for 1971. There were 2,732 million eggs produced in Florida in 1971, an increase of 8 percent over the previous year. Ten years ago the rate of lay per day was 60.8 eggs and Florida produced 1,144 million eggs.

Straight run chicks hatched by commercial hatcheries during 1971 in Florida totaled 107.0 million. Of this, broilers accounted for 63 percent and egg-type chicks 37 percent. A decade earlier, broilers represented 59 percent and egg-type chicks 41 percent of the total straight run hatch of 31.9 million birds.
